

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

Section	Details
Problem	Floods cause loss of life and property due to delayed reporting, poor communication, and lack of real-time information.
Target Users	Citizens, Disaster Management Authorities, Government Officials, Emergency Response Teams, NGOs.
Pain Points	Manual reporting, delayed emergency response, lack of flood alerts, poor coordination among agencies, limited access to rescue information.
Existing Solutions	Phone calls to emergency services, social media posts, news channels, manual government reporting systems.
Limitations of Existing Solutions	Slow response, inaccurate location tracking, no centralized platform, delayed communication, limited real-time updates.
Proposed Solution	Develop a web-based flood management platform that enables incident reporting, live alerts, rescue requests, shelter information, and real-time communication.
Key Features	User Registration, Secure Login, Flood Incident Reporting, GPS Location Tracking, Emergency Alerts, Rescue Request System, Shelter Locator, Admin Dashboard, Status Tracking.
Unique Value Proposition	A centralized platform providing real-time flood monitoring, faster emergency response, and effective coordination between citizens and authorities.
Benefits	Faster rescue operations, reduced response time, improved public safety, better disaster coordination, increased transparency.
Success Metrics	Number of incidents reported, average response time, number of successful rescues, active users, alert delivery rate, user satisfaction.
Expected Outcome	Improved disaster preparedness, quicker emergency response, minimized flood damage, and enhanced communication during flood emergencies.
