

Scalability & Future Plan

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address
1	Limited support for concurrent users	System performance may degrade with many users accessing simultaneously	High
2	Limited integration with external professional platforms	Restricts networking opportunities and profile enrichment	High
3	No long-term storage of networking interactions and recommendations	Users cannot access previous recommendations or track networking progress	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports a limited number of users on a single server	Deploy on cloud infrastructure (AWS, Google Cloud, Azure) with load balancing and auto-scaling
2	Data Storage	Basic storage for user profiles and recommendations	Implement scalable databases such as MongoDB or PostgreSQL with cloud storage support
3	Performance	AI recommendations are generated in real-time for each request	Use caching mechanisms, asynchronous processing, and optimized AI inference pipelines
4	Security	Basic authentication and API security	Implement OAuth, encryption, role-based access control, and secure API gateways

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Integration with LinkedIn, GitHub, and professional networking platforms	2 Months	Enables richer user profiles and better networking recommendations
Phase 3	AI-powered conversation starter suggestions and meeting scheduling	4 Months	Improves networking effectiveness and user engagement
Phase 4	Advanced analytics dashboard, multilingual support, and mobile application	6 Months	Expands accessibility, enhances user experience, and supports global users
